## Chemistry 1154 Fall 2022 Test 2

Name: $\qquad$ Student \#: $\qquad$

This test consists of eight pages of questions, the formula sheet, and a periodic table. Please ensure that you have a complete test and, if you do not, obtain one from me immediately. There are $\mathbf{3 0}$ marks available. Good luck!

1) [3 marks] How many grams of 80.0-percent pure $\mathrm{AgNO}_{3}(169.9 \mathrm{~g} / \mathrm{mol})$ are necessary to prepare 1075.4 mg of $\mathrm{Ag}_{2} \mathrm{CO}_{3}(275.744 \mathrm{~g} / \mathrm{mol})$ if the reaction
$2 \mathrm{AgNO}_{3}(\mathrm{aq})+\mathrm{Na}_{2} \mathrm{CO}_{3}(\mathrm{aq}) \longrightarrow 2 \mathrm{NaNO}_{3}(\mathrm{aq})+\mathrm{Ag}_{2} \mathrm{CO}_{3}(\mathrm{~s})$
proceeds with a 62.5 percent yield?
2) [ 6 marks] If 25.0 mL of $0.15 \mathrm{M} \mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2}$ are mixed with 75.0 mL of $0.050 \mathrm{M} \mathrm{Na}_{3} \mathrm{PO}_{4}$ :
$3 \mathrm{Ca}\left(\mathrm{NO}_{3}\right)_{2}(\mathrm{aq})+2 \mathrm{Na}_{3} \mathrm{PO}_{4}(\mathrm{aq}) \longrightarrow \mathrm{Ca}_{3}\left(\mathrm{PO}_{4}\right)_{2}(\mathrm{~s})+6 \mathrm{NaNO}_{3}(\mathrm{aq})$
a) Identify the limiting reagent.
b) What should be the concentration of the $\mathrm{NaNO}_{3}$ after reaction?
c) What should be the concentration of the excess reagent after reaction?
3) [2 marks] Calculate the density of $\mathrm{SF}_{6}(146.053 \mathrm{~g} / \mathrm{mol})$ at 100 torr pressure and $-5.0^{\circ} \mathrm{C}$
4) [4 marks] The molar mass of magnesium lab was carried out exactly as you'll do it in the lab, with the exception that instead of water (with a density of $1.00 \mathrm{~g} / \mathrm{cm}^{3}$ ), a mystery fluid was used. Your job is to use the data given to determine the density of the mystery fluid. You will also need to know that the density of mercury is $13.6 \mathrm{~g} / \mathrm{cm}^{3}$ and that, when the data was analyzed, the molar mass of Mg was determined to be $24.6 \mathrm{~g} / \mathrm{mol}$ (instead of 24.3 $\mathrm{g} / \mathrm{mol})$. The reaction between Mg and HCl is:
$\mathrm{Mg}+2 \mathrm{HCl} \longrightarrow \mathrm{MgCl}_{2}+\mathrm{H}_{2}(\mathrm{~g})$

Give your density in $\mathrm{g} / \mathrm{cm}^{3}$.

| Data (units) | value |
| ---: | :--- |
| Mass $\mathrm{Mg}(\mathrm{mg})$ | 52.3 |
| $\mathrm{~T}_{\text {sol'n }}\left({ }^{\circ} \mathrm{C}\right)$ | 21.4 |
| $\mathrm{P}_{\text {atm }}$ (torr) | 761.2 |
| $\mathrm{VP}_{\text {fluid }}$ (torr) | 20.3 |
| $\mathrm{~h}(\mathrm{~mm})$ | 141 |
| $\mathrm{~V}_{\text {gas }}(\mathrm{mL})$ | 53.3 |

5) [4 marks] The following apparatus was assembled:

## Bulb 1:

Chemical: $\mathrm{NH}_{3}(\mathrm{~g})$
Pressure: 2 bar
Volume: 7 litres

## Bulb 2:

Chemical: $\mathrm{O}_{2}(\mathrm{~g})$
Pressure: 5 bar
Volume: 3 litres

The bulbs were connected by a valve, and both bulbs were maintained at a temperature of $929.57^{\circ} \mathrm{C}$ at all times. When the valves were opened, the following reaction occurred:
$4 \mathrm{NH}_{3}(\mathrm{~g})+5 \mathrm{O}_{2}(\mathrm{~g}) \longrightarrow 4 \mathrm{NO}(\mathrm{g})+6 \mathrm{H}_{2} \mathrm{O}(\mathrm{g})$

Calculate the mole fractions of all species after reaction.
6) [3 marks] For the reaction:
$\mathrm{H}_{2}(\mathrm{~g})+\mathrm{I}_{2}(\mathrm{~s}) \rightleftharpoons 2 \mathrm{HI}(\mathrm{g})$
Which of the following changes should drive the reaction forward (that is, create more products), and which should change the value of $K_{p}$ for the reaction? Circle your choice in each case. If the change does not affect $\mathrm{K}_{\mathrm{p}}$ or drive the reaction forward, circle "Neither." All changes take place at constant temperature.

| Adding some $\mathrm{H}_{2}(\mathrm{~g})$ | Forward | $\mathrm{K}_{\mathrm{p}}$ | Neither |
| :--- | :--- | :--- | :--- |
| Decreasing the volume of the reaction container | Forward | $\mathrm{K}_{\mathrm{p}}$ | Neither |
| Adding some NaOH (reacts with HI) | Forward | $\mathrm{K}_{p}$ | Neither |

7) [8 marks] Given the equilibrium:
$2 \mathrm{C}(\mathrm{s})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightleftharpoons \mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g}) \quad \Delta \mathrm{H}^{\circ}=-84 \mathrm{~kJ}$ and $\mathrm{K}_{\mathrm{p}}=19.9 @ 150^{\circ} \mathrm{C}$
a) $K_{p}$ for the reaction
$2 \mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g}) \rightleftharpoons 4 \mathrm{C}(\mathrm{s})+6 \mathrm{H}_{2}(\mathrm{~g})$
at $150^{\circ} \mathrm{C}$ would be:
i) -396.01
ii) -39.8
iii) 0.00253
iv) 0.0251
b) $\mathrm{K}_{\mathrm{c}}$ for the reaction
$2 \mathrm{C}(\mathrm{s})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightleftharpoons \mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g}) \quad \Delta \mathrm{H}^{\circ}=-84 \mathrm{~kJ}$ and $\mathrm{K}_{\mathrm{p}}=19.9 @ 150^{\circ} \mathrm{C}$
at $150^{\circ} \mathrm{C}$ would be:
i) $2.46 \times 10^{4}$
ii) $2.46 \times 10^{8}$
iii) $3.05 \times 10^{7}$
iv) $3.05 \times 10^{15}$
c) $K_{p}$ for the reaction
$2 \mathrm{C}(\mathrm{s})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightleftharpoons \mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g}) \quad \Delta \mathrm{H}^{\circ}=-84 \mathrm{~kJ}$ and $\mathrm{K}_{\mathrm{p}}=19.9 @ 150^{\circ} \mathrm{C}$
at $175^{\circ} \mathrm{C}$ would be:
i) $2.9 \times 10^{-57}$
ii) 0.00132
iii) 5.25
iv) 19.9
d) Given the additional reaction
$2 \mathrm{C}(\mathrm{s})+2 \mathrm{H}_{2}(\mathrm{~g}) \rightleftharpoons \mathrm{C}_{2} \mathrm{H}_{4}(\mathrm{~g}) \quad \mathrm{K}_{\mathrm{p}}=5.63 \times 10^{-10} @ 150^{\circ} \mathrm{C}$
then $K_{p}$ for the reaction
$\mathrm{C}_{2} \mathrm{H}_{4}(\mathrm{~g})+\mathrm{H}_{2}(\mathrm{~g}) \rightleftharpoons \mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g})$
at $150^{\circ} \mathrm{C}$ would be
i) $-1.12 \times 10^{-8}$
ii) $1.12 \times 10^{-8}$
iii) 19.9
iv) $3.53 \times 10^{10}$
