## Chemistry 1154 Fall 2022 Test 3

Thursday, November 24, 2022 Time: 1 hour 50 minutes

Name: \_\_\_\_\_ Student #: \_\_\_\_\_

This test consists of **ten** pages of questions, the formula sheet, and a periodic table. Please ensure that you have a complete test and, if you do not, obtain one from me **immediately**. There are **46** marks available. Good luck!

1) [5 marks total] A 2.0-litre flask was filled with 6 moles of  $CH_4$ , 2 moles of  $C_3H_8$ , and 4 moles of  $H_2$ , and the equilibrium

$$3CH_4(g) \longrightarrow C_3H_8(g) + 2H_2(g)$$
 K = 4.0 at 601.36 K established at 601.36 K.

a) [1 mark] In which direction did the reaction shift to establish equilibrium? How do you know? (No marks for guessing. (3))

b) [4 marks] Calculate the equilibrium partial pressures of all species.

| 2) | [5 marks total] Butyric acid (HC <sub>4</sub> H <sub>7</sub> O <sub>2</sub> ) has a pK <sub>a</sub> of 4.82 and, apparently, the odour of vomit. |
|----|--|
|    | Calculate the pH of the following solutions made using butyric acid and/or its salts. All  |
|    | solutions were made at 25°C.   |

a) [2 marks] 0.0661 M butyric acid

b) [3 marks] 0.151 M potassium butyrate

| 3) | [10 marks total] Caffeine ( $C_8H_{10}N_4O_2$ ) is a weak base with a $K_b = 4.1 \times 10^{-4}$ and, of course, |
|----|--|
|    | the substance essential to my coherence at 8 AM on Mondays and Thursdays. Calculate the                          |
|    | pH of the following solutions made using caffeine and/or its salts. All solutions were made                      |
|    | at 5°C, where $K_w = 2.0 \times 10^{-15}$ .  |

a) [3 marks] 0.98 M caffeine

b) [4 marks] 10.0 mL of 0.99 M caffeine and 15.0 mL of 1.35 M caffeine hydrochloride

c) [3 marks] 0.205 M caffeine hydrochloride

| 4) | [6 marks total] Arsenic acid ( $H_3AsO_4$ ) is a polyprotic acid with $K_{a1} = 6 \times 10^{-3}$ , $K_{a2} = 1.1 \times 10^{-7}$ , |  |
|----|---|--|
|    | and $K_{a3} = 3 \times 10^{-12}$ . It is also very toxic, and so not to be mixed with morning tea (or, really,                      |  |
|    | tea at any other time of the day). Calculate the pH of the following solutions, all made using                                      |  |
|    | arsenic acid and/or its salts. All solutions were made at 25°C.   |  |

a) [4 marks] 10.0 mL of 1.0 M arsenic acid and 10.0 mL of 2.75 M NaOH

b) [2 marks] 1.0 M Na<sub>2</sub>HAsO<sub>4</sub>

| 5) | [1 mark] A solution has a pH of 6.50. The solution is:  |  |  |
|----|---|--|--|
|    | <ul><li>a) Acidic</li><li>b) Basic</li><li>c) Neutral</li><li>d) Potentially any of the above</li></ul>   |  |  |
| 6) | [3 marks] A 0.250 M HClO <sub>4</sub> solution is titrated with 0.250 M KOH. Calculate the pH at the equivalence point. The titration was carried out at a temperature where $K_w = 1.0 \times 10^{-13}$ . (No marks for guessing. (3)) |  |  |

7) [2 marks] Calculate the pH of a  $5.00 \times 10^{-3}$  M solution of Mg(OH)<sub>2</sub> at  $25^{\circ}$ C.

- 8) [3 marks] The indicator thymol blue begins its colour change at pH = 1.2, when the ratio  $\frac{[In^-]}{[HIn]} = \frac{1}{6}$ .
  - a) What is the pK<sub>a</sub> for the indicator?

b) Thymol blue ends its colour change when the ratio  $\frac{[In^-]}{[HIn]} = \frac{6}{1}$ . What will be the pH of the solution at this point?

c) Do you think this indicator would be suitable for use when titrating a weak acid with a strong base? Why or why not? (No marks for guessing. (3))

9) [4 marks total] Given the following reactions:

$$Ca(s) + 2C(s)$$
 $\Delta H^{\circ} = -62.8 \text{ kJ}$ 
 $2Ca(s) + O_2(g)$ 
 $\rightarrow$   $2CaO(s)$ 
 $\Delta H^{\circ} = -1271 \text{ kJ}$ 
 $CaO(s) + H_2O(l)$ 
 $\rightarrow$   $Ca(OH)_2(aq)$ 
 $\Delta H^{\circ} = -653.1 \text{ kJ}$ 
 $2C_2H_2(g) + 5O_2(g)$ 
 $\rightarrow$   $4CO_2(g) + 2H_2O(l)$ 
 $\Delta H^{\circ} = -2600 \text{ kJ}$ 
 $C(s) + O_2(g)$ 
 $\rightarrow$   $CO_2(g)$ 
 $\Delta H^{\circ} = -393.5 \text{ kJ}$ 

a) [3 marks] Calculate  $\Delta H^{\circ}$  for the reaction:

$$Ca(OH)_2(aq) + C_2H_2(g) \longrightarrow CaC_2(s) + 2H_2O(l)$$

b) [1 mark] What is the molar enthalpy of formation of CaO?

10) [3 marks] Complete the table below given the reaction and the other data in the table. All work must be shown in order to receive any credit.

| Compound            | ΔH° <sub>f</sub> (kJ/mol) |
|---------------------|---------------------------|
| NH₃(g)              |                           |
| O <sub>2</sub> (g)  |                           |
| NO(g)               | 90.29                     |
| H <sub>2</sub> O(I) | -285.83                   |

$$4NH_3(g) + 5O_2(g) \longrightarrow 4NO(g) + 6H_2O(I)$$
  $\Delta H^{\circ} = -1170.22 \text{ kJ}$ 

11) [4 marks] A sample of benzoic acid ( $HC_7H_5O_2$ , 122.12 g/mol) of mass 610.6 mg was burned in a bomb calorimeter with a heat capacity of 20.0 kJ/°C:

$$2HC_7H_5O_2(s) + 15O_2(g) \longrightarrow 14CO_2(g) + 6H_2O(l)$$

The temperature of the calorimeter rose by 0.80669°C. Calculate  $\Delta H^{\circ}_{298}$  for the combustion of benzoic acid.
